

B - Draw Frame

分值：200 分

Problem Statement

There is a grid with H rows and W columns. Takahashi is going to paint each cell of this grid black or white.

有一个 H 行 W 列的网格。高桥打算将网格的每个格子涂成黑色或白色。

He paints all cells on the border of the grid black, and all other cells white. Output the grid after he has painted it.

他将网格边界上的所有格子涂成黑色，其余所有格子涂成白色。请输出涂色完成后的网格。

More formally

更正式地说

There is an $H \times W$ grid.

有一个大小为 $H \times W$ 的网格。

We call the cell at the i -th row from the top ($1 \leq i \leq H$) and the j -th column from the left ($1 \leq j \leq W$) cell (i, j) .

我们将从上往下数第 i 行、从左往右数第 j 列的格子记作 (i, j) 。

Cell (i, j) ($1 \leq i \leq H, 1 \leq j \leq W$) and cell (k, l) ($1 \leq k \leq H, 1 \leq l \leq W$) are said to be **edge-adjacent** if and only if $|i - k| + |j - l| = 1$.

当且仅当 $|i - k| + |j - l| = 1$ 时，称格子 (i, j) ($1 \leq i \leq H, 1 \leq j \leq W$) 和格子 (k, l) ($1 \leq k \leq H, 1 \leq l \leq W$) **边相邻**。

Cell (i, j) is said to be **on the border** if and only if the number of cells edge-adjacent to cell (i, j) is at most 3.

当且仅当与格子 (i, j) 边相邻的格子数量不超过 3 时，称格子 (i, j) **在边界上**。

Find H strings $S_1, S_2, \dots, S_H$ satisfying the following condition.

求满足以下条件的 H 个字符串 $S_1, S_2, \dots, S_H$ 。

- S_i is a string of length W , and the j -th character of S_i is # if cell (i, j) is on the border, and . otherwise.
- S_i 是一个长度为 W 的字符串，若格子 (i, j) 在边界上，则 S_i 的第 j 个字符为 #，否则为 。

Constraints

- $3 \leq H \leq 10$
- $3 \leq W \leq 10$
- All input values are integers.
- $3 \leq H \leq 10$
- $3 \leq W \leq 10$
- 所有输入值均为整数。

Input

The input is given from Standard Input in the following format:

输入按照以下格式从标准输入给出：

H W

Output

Output H lines, each a string of length W . The j -th character ($1 \leq j \leq W$) of the i -th line ($1 \leq i \leq H$) should be # if cell (i, j) is painted black, and . if it is painted white.

输出 H 行，每行是一个长度为 W 的字符串。若格子 (i, j) 被涂成黑色，则第 i 行的第 j 个字符 ($1 \leq j \leq W$) 应为 #，若涂成白色则应为 。

Sample Output 1

```
#####  
#...#  
#...#  
#####
```

For example, cell (1, 1) is on the border. This is because there are only two cells edge-adjacent to cell (1, 1): cells (1, 2) and (2, 1). Thus, cell (1, 1) is painted black, so the first character of the first line should be #.

例如，格子 (1, 1) 在边界上。这是因为与格子 (1, 1) 边相邻的格子只有两个：格子 (1, 2) 和格子 (2, 1)。因此格子 (1, 1) 被涂成黑色，所以第一行的第一个字符应为 #。

Conversely, for example, cell (3, 4) is not on the border. This is because there are four cells edge-adjacent to cell (3, 4): cells (2, 4), (3, 3), (3, 5), and (4, 4). Thus, cell (3, 4) is painted white, so the fourth character of the third line should be ..

反之，例如格子 (3, 4) 不在边界上。这是因为与格子 (3, 4) 边相邻的格子有四个：格子 (2, 4)、(3, 3)、(3, 5)，和 (4, 4)。因此格子 (3, 4) 被涂成白色，所以第三行的第四个字符应为 ..
